tables

AER 3018 R

Aerofoil tables.

Carefully crafted using the finest materials, the aerofoil table collection combines elegance and functionality for conference and meeting room solutions. The beautiful aerofoil shaped table legs both provide the stability for these architectural furniture pieces and also provide a simple cable management system through a discreet lift-off panel on the inside face of the curved and veneered leg, allowing power modules to be placed directly over the leg frames and the cables to be easily managed vertically.

Run your hands over the table tops which are finished with real wood veneer, or nano-laminate over solid wood lippings and a 'bullet' edge profile, and you can appreciate not only its undeniable design excellence, but its meticulous craftsmanship and longevity.

Intelligent and mindful.

Sleek lines, luxurious materials, exquisite detailing. Verco's broad table collection has been reimagined to include the aerofoil collection with new edge profiling in solid wood, bringing a touch of sophistication as well as improved durability over time , making this range a fully sustainable option.

Feel empowered by the quality, style and craftsmanship that each carefully selected model exudes, and let its versatility, sustainability and innovation style inspire you to achieve greatness.
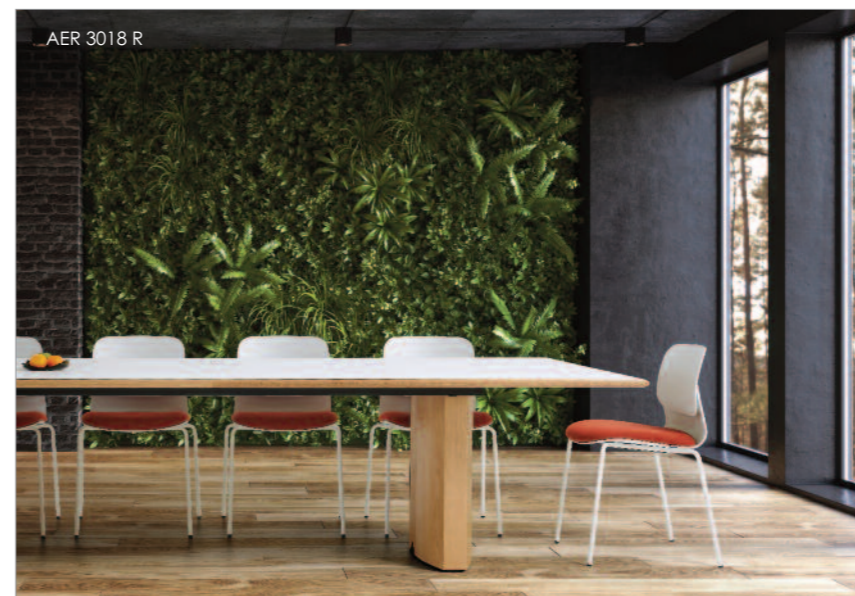

With simple vertical and horizontal cable management, this range provides the ultimate conference/meeting solution.
